South African Education Project

- *“Empowering education, Transforming futures.”*

Located in Phillipi, Cape Town, the South African Education Project (SAEP) is a non-profit organization in South Africa. For children, teenagers and educators, SAEP has offered education, life-skills and psychosocial support programs since 1994.

Its programs are designed to enhance educational opportunities and assist youth in gaining the necessary skills for future education and employment. (SAEP, 2026)

Vision and mission

The main objective is to develop a modern, easily navigable, and responsive website that effectively portrays SAEP’s programs and impact.

The main goals are to:

- Make it easier to locate information on mobile devices.
- Make SAEP’s programs widely accessible, boosting volunteer registrations and online donations.
- Highlight achievements and measurable effects on the community.
- Boost stakeholders and SAEP communication.

Website visits, donation rates, contact form submissions, and average time spent on program pages are some of the KPIs.

Website analysis

The current SAEP website offers helpful details about its programs, impact, contact information and organizational history. A contact form is also included. SAEP calls to action, mobile usability, visual consistency, and information hierarchy should all be enhanced by the suggested redesign. Throughout the website, actions like Donate, Volunteer and Get involved should be clearly displayed.

Proposed features and functionality

- The **Home page** features call to action and a compelling introduction.
- **About us** and the history of the organization.
- A page that provides comprehensive program details.

- A **contact** page containing a form and location details.

Design and user experience

A friendly, refined and education-focused visual identity will be used in the design.

Color scheme: white, turquoise, dark blue and warm yellow accent.

Typography: headings and body will be written in Aptos with appropriate spacing and legible typeface.

Layout and design: the design will be responsive, making it suitable for desktop computers, tablets and smartphones. A straightforward menu with big “Donate” and “Get involved” buttons will be used as navigation. The wire frame is shown below.

Technical requirements

The website will use HTML5, CSS3 and JavaScript, with responsive CSS techniques. A suitable domain such as the SAEP website will be retained, while reliable web hosting, SSL security, image optimization, backups and basic SEO will be implemented.

Timeline and budget

Planning and research (Week 1), content and wireframes (Week 2), HTML development (Week 3), CSS and responsive design (Week 4), testing and accessibility enhancements (Week 5), and final deployment (Week 6) can all be finished in six weeks.

An estimated student project budget is R12, 000 – R18,000, including development, hosting setup, basic SEO, testing and initial maintenance.
